

1) Search for ODBC and open *ODBC Data Sources*

2) Click Add

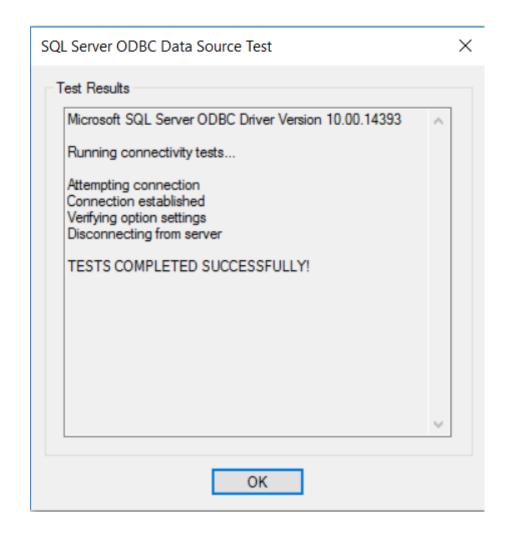

3) Select *ODBC Driver 11 for SQL Server* and click *Finish*

5) The name and description want to assign to this ODBC connection. This is the name you'll use to call from R. Use the same root name as the server name to make R script sharing easier.

4) The server name to which you want to connect. This can be any of the servers to which you connect via SQL Server Management Studio

7) Test the connection. If you see this window, you're good to go!
